

BUCKEYE LUBRICANTS #MEB & MEB-CL SEMI-SYNTHETIC COOLANTS

Buckeye Lubricants #**MEB & MEB-CL** were developed to dramatically increase tool life on a variety of machining applications, using **carbide, HS steel** or **CBN tools**. They have proven to be particularly effective on materials that are difficult to machine such as **ALUMINUM, STAINLESS STEEL, INCONEL, and HASTALLOY**; as well as on abrasive metals including **CAST IRON** and **MALLEABLE IRON**. **MEB-CL** contains chlorine to provide increased performance on the most difficult operations, where the use of chlorine is acceptable.

#**MEB & MEB-CL** are micro-emulsions and minimize any deposits or residue on parts and machines while still maintaining superior tool life and corrosion protection.

#**MEB & MEB-CL** are also suitable for most grinding operations. Their clarity enable the operator to see the work being done, while providing excellent finishes to the metal without loading the wheel.

#**MEB & MEB-CL** are both **LOW FOAMING** Products, making them suitable for high turbulence and high pressure applications. In addition, their cooling and lubricating properties make them excellent products for creep feed grinding.

SAMPLES PROVIDED ON REQUEST

Buckeye Lubricants #**MEB & MEB-CL** are **SUPERIOR** Semi-Synthetic Machining & Grinding Coolants featuring micro-emulsion formulations to maximize tool life, performance & machine cleanliness while minimizing residue and carry-out!!
