

BUCKEYE LUBRICANTS #12MN-TI SYNTHETIC GRINDING COOLANT

Buckeye Lubricants #12MN-TI is an excellent synthetic grinding coolant developed for all surface grinding applications. It can be used with steel, cast iron, brass and most other metals.

#12MN-TI keeps the wheel open and cutting, reducing the need for dressing while increasing productivity and extending wheel life. This product carries the grit and sludge back to the coolant tank where it is allowed to settle out. This minimizes recirculation of fines which reduces scratching on the work piece and keeps the machines and systems clean.

The low foaming characteristics of #12MN-TI make it suitable for use in ALL surface grinding applications including high turbulence ones like double disk. In addition, the sludge will not harden in the sump and there is no salting out of deposits or sticky residue left on the equipment.

#12MN-TI provides excellent performance on cast iron and offers corrosion protection at dilutions up to 30:1. with no odor problems. It is clear with a slight green tint, allowing the operator to see the work. #12MN-TI is characterized by long life and ease of recycling allowing it to last for extended time in the system with proper upkeep.
